

COMET® 5 11 M

NEW:
11 Megapixel Camera Resolution

COMET 5 with its exceptionally innovative sensor concept offers high flexibility and precision for demanding measuring applications. The modular design allows for quick and easy adaptation of the system to the measurement volume required by the application and thereby offers the maximum of configuration flexibility for each individual measurement task.

COMET 5 is available with different sensor resolutions. Now featuring an 11 megapixel camera, the system offers an outstanding level of detail for the digitization of delicately shaped objects. Even for large fields of view, the point density of the new sensor is nearly double compared to the current state-of-the-art.

- 11 megapixel camera resolution for outstanding level of detail
- excellent data quality
- high measuring speed
- different fields of view available
